

S3 Figures. Features of cranial morphology in lions.

Part A S3 Fig. Juvenile lion cranium (DMNH, TM 979) showing normal alignment of maxilla-nasal-frontal sutures. Specimen from Tanzania. [Photo: V.L. Williams]

Part B S3 Fig. Lioness cranium from Sudan (OUMNH 14189). Apex of the nasal-frontal sutures slightly posterior to the apices of the maxilla-frontal sutures. [Photo: A.J. Loveridge]

Part C S3 Fig. Cranium of a lion of unknown sex and origin (EIS BP/4/184). Nasal-frontal sutures extend more posterior than the maxilla-frontal sutures. [Photo: V.L. Williams]

Part D S3 Fig. Cranium of 7.5-year-old lion from Hwange (NEHcM4). The apices of the nasal-frontal sutures are very slightly anterior to the apices of the maxilla-frontal sutures and are not aligned. [Photo: J. Hunt]
